

Ekosistemski procesi/procesi v ekosistemih

Procesi v ekosistemih so bistvene značilnosti ekosistema in so bistvenega pomena za delovanje ekosistema, razvoj in vzdrževanje svoje integritete (UK National Ecosystem Assessment 2011)¹⁾. Ekosistemski procesi vključujejo tako razgradnjo, proizvodnjo, kroženje hranil ter ponor hranil in energije (Reid 2005)²⁾ kot tudi značilnosti, ki določajo populacijsko dinamiko, npr. širjenje semen in selitve (Potschin et al. 2016)³⁾. So interakcije med biotskimi in abiotskimi elementi ekosistema, ki so osnova za funkcijo ekosistemov (glej [funkcije ekosistemov](#)) (Harrington et al. 2010)⁴⁾.
