

Adaptation and mitigation options for Alpine lakes

Source

[Climate Change Recommendations from SILMAS](#)

Comment

Target sectors include agriculture, fishing, forestry, urban development, power generation, recreation and tourism, navigation.

Spatially relevant processes and mitigation measures in a brief booklet: e.g. agriculture (higher precipitation ⇒ need for irrigation, more intense events ⇒ soil conservation, protection of water courses), urban development (adaption of sewage to extreme events and algae, infrastructural adaptations), recreation/tourism (heavier use of shore zones ⇒ water contamination counter-measures, access to water in low-level times)
