WIKIAlps - the Alpine WIKI - http://www.wikialps.eu/

# How to use the wiki WIKIAlps?

# HOW DOES WIKIALPS WORK?

WIKIAlps works like a "cross-referenced mind map"- it does not have a classic structure like a normal homepage. It is flexible and user oriented which means that you as a user can actively shape the wiki and its contents. Here is some basic information about the type of links and icons that will help you better understand the wiki:

<b>Red</b>   be cr	link: No existing article behind it, needs to reated
Gree	n Link: marks an existing article
insid	e WIKIAlps
Blue	link: marks a link to a website
outs	de wikiAtps
Site	map shows a list of all existing
	articles
Rece	ent changes shows a list of the last modified articles
в	Edit this article
0	<b>Old revisions:</b> shows previous versions of the articles
%	<b>Backlinks:</b> shows all the articles that have links to the current article.
2	<b>Pdf:</b> creates a pdf out of the article's con- tent

### WHO CAN CONTRIBUTE?

If you would like to share your experience and knowledge of spatial development in the Alpine Space, please feel free to actively contribute to WIKIAlps. You are able to edit articles, create new ones or contribute simply to one of the open discussions you will find below selected articles.

### WHAT CAN YOU DO?

Just create an account by clicking on the register button

(top-right of the page) to start

contributing to the wiki.

# HOW TO EDIT THE WIKI:

Adding information to the wiki is easy and straightforward. Here you may find some basic information on how to do this. A more extended explanation on how to contribute to the wiki is available in the DokuWiki Manual.

#### How to edit an article:

In order to edit an article, the first thing to do is to login

(or create an account if it's your

first time). Then, just navigate to the article you would like to edit, click on the *side* icon (on the right side of the screen) and the editing window will open up.

Login

Here there are several ways to edit:

- 1. You can modify the article in the editing window, or
- Copy the contents of the current article, paste it in a Notepad file, modify there and paste in the modify window again (we recommend this way in case editing will take longer than a few minutes), or
- 3. Create the article in Word, copy the text into a Notepad file to eliminate all formatting syntax and then copy and paste the wordpad text into the editing window.

To add wiki-format to the text (create bold, underlined text, create internal and external links, insert

an image...) use the formatting toolbar 1. Using the icons in this toolbar will add the needed characters to transform the plain text into wiki-formatted text. Once you know the characters, you can manually introduce them by yourself. For more information on formatting visit the Formatting Syntax article. You can have a preview of how your article would look like pressing the preview icon

 ${f U}$ , and if you are happy with the result, press the save icon  ${f \Theta}.$ 

#### How to create a new article:

The first step to create a new article is to have a red link (eg. Alpine Space: ) inside the wiki. If this

red link already exists, all you have to do is click on the red link, then on the final icon and proceed with editing an article as described above. You can use this WIKIAlps template or use existing articles as templates by copying the text inside the editing box and changing the contents afterwards. For certain types of articles (add a project, add a relevant planning document), there are templates already inside the wiki.

This topic does not exist yet
You've followed a link to a topic that doesn't exist yet. If permissions allow, you may create it by clicking on "Create this page".

In the case that the red link does not exist, you have to add it to the wiki by editing an existing article.

To transform any term into an internal (red) link, just click on the icon on the editing toolbar, and when you save your changes, a new red link will appear in the article. Then, click on the red link and proceed as explained before.

#### How to participate in a discussion or create a new one:

WIKIAlps also wants to be a platform to foster the interchange of ideas regarding spatial development and, therefore, a discussion section is available at the end of the articles. To leave a comment in any discussion section, you must also be registered. When you are logged in, you just have to add your comment in the discussion section of the article. If you want to create a new discussion section in an article, you have to edit the article and add **DISCUSSION** at the end. Once you save the changes, the discussion section will appear in the article and then you may add your comment. Last update: 2017/10/03 08:46

# SOFTWARE

We are using the "DokuWiki" software packet for our WIKIAlps wiki as it offers an easy to use interface. The user does not need special XHTML or CSS knowledge for editing, designing or creating the articles. All versions of the articles are stored on the server's file system as text files. If unwanted content is uploaded to the wiki, we can always revert to a previous version. DokuWiki

# DISCLAIMER

Please read the disclaimer for further information.
