

## Freight transport

“Freight transport activity or freight transport demand is the total volume of freight transport in tonne-km travelled. Modal split covers public trucks, rail transport and inland navigation. It should be noted that inland navigation includes both waterborne inland transport activity and domestic sea shipping. However, international short sea shipping is not included in the above category as, according to EUROSTAT energy balances, energy needs for international shipping are allocated to bunkers.”

## Logistics

“Freight Transport Logistics focuses on the planning, organisation, management, control and execution of freight transport operations in the supply chain.”
