

Obstacles impeding transnational spatial development

Are there any obstacles addressed which might impede a transnational sustainable spatial development in the sense of lacking of joint transnational activities as well as a missing understanding of the SSD requirements. Are there needs to overcome these obstacles or challenges which could not be solved? The analysed documents were least resourceful in regard to obstacles impeding transnational spatial development. Administrative, legal and cultural differences, lack of cross-border coordination, data and statistics and lack of accessibility account for more than five entries, whereas all other obstacles are only sporadically mentioned.

Chart of obstacles to transnational spatial development identified in the [document analysis](#):
