

<b>Section</b>	<b>Description</b>
<b>Resource Title</b>	Agricultural Rate
<b>Resource Abstract</b>	Since the middle of the 20 <sup>th</sup> century, the structure of both the economy and the population has undergone a fundamental change in the course of industrialization, urbanization and the decline of agriculture. The proportion of the Alpine population employed in agriculture has decreased significantly in the past decades. For many families agriculture no longer brought in sufficient earnings and they could not reach a similar standard of living to city dwellers. Therefore, extra-agricultural forms of employment became even more important. Early on, the rural population started to look for work in the fast growing industrial locations in the valleys. Following on from that, many farms were abandoned.
