

<b>Section</b>	<b>Description</b>
<b>Resource Title</b>	Natural Population Growth
<b>Resource Abstract</b>	An important determinant of population development is the rate of regeneration within a population. The figure is arrived at by taking the births minus the deaths in relation to the population total for a given area. The map shows the natural rate of regeneration only, whereas the actual population development must take into consideration the migration balance as well.

<b>Lineage</b>	Natural Population Growth = $(1 + ((\text{births} - \text{deaths}) / \text{residents})) * 100$  The indicator represents the natural population growth in 2011, calculated by taking the births minus the deaths registered in the year 2011, in relation to the total population of each municipality.
