

Section	Description
Resource Title	Old to Young Age Dependency Ratio
Resource Abstract	The old to young age dependency ratio relates the number of over 64s to that of the under 15s. It shows how many persons of retirement age there are for every hundred children and adolescents. This figure is very rarely used in demographics and relates the two non-working sections of the population to each other, i.e. those definitely no longer working and the young people who will be working in the future. It shows very clearly the kind of demographic trend that a municipality can expect and the kind of infrastructure i.e. schools and facilities for the care of the elderly, that will be needed in the future.
Resource Type	Dataset
