

Section	Description
Resource Title	Out-commuters Ratio
Resource Abstract	Out-commuting means travelling daily from one municipality to another as jobs are not necessarily located in the same municipality as the residence. Out-commuting means dependence on other municipalities in terms of employment. This is a common phenomenon in modern societies where means of transport, particularly private cars, no longer confine people to living near their place of work. Out-commuting may be understandable since it makes it possible to reconcile residential choices, such as living in the countryside, with professional occupations increasingly executed in cities. However, it puts a strain on sustainable development, since increased mobility comes at the cost of urban sprawl and may lower the quality of life for those who are compelled to live far from their workplace.
Resource Type	Dataset
