

Section	Description
Resource Title	Total Dependency Ratio
Resource Abstract	The indicator expresses the socio-political burden on the economically active population which has to support the non-active population through their taxes. The socio-political transfer of the individual Alpine states to regions with a high proportion of economically non-active people is disproportionately high. This map therefore indicates structural weaknesses of individual regions such as emigration of the economically active population to places with attractive employment opportunities.
Resource Type	Dataset
