

Section	Description
Resource Title	Young Age Dependency Ratio
Resource Abstract	The young age dependency ratio is defined as the ratio of the number of young persons (under 15) to the number of working persons aged between 15 and 64. The proportion expresses the socio-economic “future vitality” of a population as well as the socio-political “burden” on the working population caused by the young generation. This group too incurs general costs for parents providing infrastructure and care for the young. However, the socio-political consequences for the future are perfectly obvious: fewer children and adolescents today mean a smaller working population, fewer tax payers and parents tomorrow.
