

<b>Section</b>	<b>Description</b>
<b>Resource Title</b>	Symbolic alpine plants and animals, landscapes – Supply
<b>Resource Abstract</b>	<p>Symbolic species and landscapes form part of the heritage of the Alpine area and represent Alpine nature to people, inside and outside the Alps. They are valuable for the ecologic, cultural and economic development of the Alpine space.</p> <p>The supply of this cultural ecosystem service can be mapped by determining the spatial distribution of selected symbolic plants and animals, including edelweiss, gentian, alpenrose, larch, pine, Alpine ibex, chamois, marmot, brown bear, and golden eagle.</p>
<b>Resource Type</b>	Dataset

<b>Lineage</b>	<p>Area-weighted index ranging from 0-1.</p> <p>The distribution of the selected plant and animal species can be derived from actual distribution maps of the individual species or by modelling their potential habitat if the former is not available. The presence (1) or absence (0) of each species is mapped in a raster map and the area-weighted index can be obtained by summing the area-weighted mean values of the different species within each municipality. See Schirpke et al. (2018) for further details.</p> <p>Schirpke, U., Meisch, C., &amp; Tappeiner, U. (2018).
