

Section	Description
Resource Title	In-commuters Ratio
Resource Abstract	Incoming commuter flows illustrate the other facet of commuting: many jobs in one municipality may be held by residents of others. This is a measure of its attractiveness in terms of jobs. However, attractiveness and dependence are not contradictory phenomena, they often superimpose. Incoming commuting will be important in municipalities that concentrate jobs and play the role of employment hubs in the Alps: they provide employment to people living in the same labour Market Region.
